PREFACE

The first purpose of any student's dictionary is to provide the basic information necessary to be able to understand a meaning, decipher a pronunciation, make a correct syllable break, and employ vocabulary appropriate to a particular situation. *The Facts On File Student's Dictionary of American English* is designed to provide such information as accurately, concisely, and clearly as possible. Its modest entry list of about 90,000 words includes the vocabulary most of us use every day in ordinary writing and encounter in reading a newspaper, novel, magazine, or online article. It also includes a selection of widely used new terms in English from science and technology and contemporary American culture.

Each entry of the standard vocabulary has been evaluated and revised according to current usage. The English language often adds new meanings to "old words," which have been pressed into service to describe changing times, perceptions, and attitudes. In order to call attention to extended and new meanings for older words, the editor of this dictionary has made free use of the label *Fig.* (Figurative) to mark usages that have strayed from the bounds of a term's core meaning. Such adaptability is surely what makes English a lively and inventive language.

Along with abundant use of the figurative label, this *Student's Dictionary of American English* radically differs from more expansive dictionaries, and even collegiate dictionaries, in its concise treatment of function words—*come*, *have*, *go*, *for*, *open*, etc. These are the words so essential to the basic formulations of English that traditional dictionaries often identify scores of meanings for them. Except for the language specialist, most of these meanings are separated

by so little difference that the ordinary student or general user is hard pressed to understand the distinction. In this dictionary, such entries have been trimmed to *core* meanings; *shades* of meaning are illustrated by phrases or sentences that follow a definition, not by different definitions entirely.

The editor has eschewed overreliance on usage labels (*Slang*, *Informal*) as well, using them only where the user should be alerted to the level of use, so that an informed decision can be made as to whether a particular word is appropriate to a particular context. Likewise, archaic vocabulary has been systematically reduced to those poetic archaisms and other vestiges of ancient vocabulary that students are most likely to encounter. The argument that a student might encounter a particular archaic term does not outweigh the necessity of using available space in the dictionary to cover more completely current usage of words whose definitions have expanded in recent years. While a glossary in a literary text will most likely define an archaism, it will not do the same for the expanded meanings of terms such as *marriage* or *partner*, which today have new and different meanings in addition to their core meanings.

Any dictionary is a reflection of the work of many people who have contributed their ideas and knowledge of language to the long line of dictionaries compiled over the years, and any new dictionary draws heavily on works that have preceded it. The editor has drawn on the experience, expertise, and traditions of the people and tools of the dictionary trade. One such tool, without which the dictionary would descend into a personal account of today's Eng-

lish, is a citation file, the editor's primary source. It is a collection of examples of vocabulary and usage taken from contemporary newspapers, magazines, journals, novels—and including, transcripts of television and radio broadcasts, newsletters, and other casual written materials. This editor had unrestricted access to one of the world's largest citation files of American English.

This editor has benefited greatly from the advice and assistance of many people, includ-

ing Robert K. Barnhart, an especially gifted and experienced dictionary maker whose insights and balanced views have been of great value. And without the help of Albert Crocco and Vivien Gentile, individuals willing to number, check, copy, and keep pages in order, the project would surely have foundered.

EXPLANATORY NOTES

The Facts On File Student's Dictionary of American English is a dictionary for the general user who has questions about contemporary English vocabulary. The following notes explain how the dictionary is organized to make it easier for the user to find information.

ORGANIZATION

The **entries** in the dictionary are arranged in one alphabetical list.

Guide words at the top of the page indicate the alphabetic span of each two-page spread.

Entry words that have the same spelling (**homographs**) but are different words altogether are listed separately and marked by a superscript homograph number. For example,

bit¹ . . . part of a bridle . . .

bit² . . . small piece . . .

bit³ . . . unit of information . . .

PARTS OF AN ENTRY

The sample entries below show the order of information in this dictionary.

ac·tion (ak'shən), *n.* **1** process of acting: *a machine in action.* **2** thing done; act. **3** way of moving or working; movement. **4** a minor battle or combat between military forces. **5** a lawsuit. **actions**, conduct; behavior.

take action, **a** become active. **b** start working. **c** Also, **bring action**, start a lawsuit. [< F < L *actio*. See ACT.] —**ac'tion-less**, *adj.*

ar·rest (ə rest'), *v.* **1** seize by legal authority; apprehend. **2** catch and hold; capture. **3** stop; check; halt. —*n.* **1** a seizing by legal authority. **2** a stopping; checking. **3** any device for arresting motion in a mechanism.

under arrest, held by the authorities; in custody. [< OF < VL, < L *ad-* + *re-* back + *stare* stand] —**ar·rest'er**, *n.* —**ar·rest'ment**, *n.*

The **entry word**, in **boldface**, is broken into syllables.

The **pronunciation** is a phonetic respelling of the entry word, including accents indicating stress in pronunciation. Variant pronunciations, including those for foreign words, are also provided. A pronunciation key is provided on page viii.

ar·tic·u·late (*adj.* är tik'yə lit; *v.* är tik'yə lāt) . . .

bi·va·lent (bī vā'lənt; biv'ə-) . . .

Inflected forms follow the pronunciation. They are given for all entry words where the spelling for different parts of speech differs from the form of the entry word, as in the following example: **blab** (blab), *v.*, **blabbed**, **blab·bing** . . .

Inflected forms are also individually pronounced where there might be a question about their pronunciation: **for·mu·la** . . . *n.*, *pl.* **-las**, **-lae** (–le) . . .

The **part of speech** indicates the grammatical function of a word. In the case of words that have more than one part of speech, each is labeled and defined separately within an entry.

Labels provide various kinds of information, and most of them are self-explanatory, such as part of speech or a language (French, Latin, etc.). For example,

ex li·bris . . . *Latin* . . .

a ri·ve·der·ci, **ar·ri·ve·der·ci** . . . *Italian* . . .

or, sometimes, a regionalism,

ar·roy·o . . . *SW U.S.*

A label also shows the level of usage, for example, *Informal* or *Slang*. (See also Special Features, below.) The label *Archaic* indicates that a term is not considered part of the modern vocabulary; writers will sometimes deliberately use an archaism for effect.

Numbered definitions distinguish between different meanings for an entry word. In general, the most common meaning is given first. Figurative meanings are often given after the core or concrete meaning to highlight semantic development.

Idioms associated with an entry word are listed separately and defined after the last definition. The full idiom (and any variant forms) is printed in boldface type followed by the definition or definitions for it.

The **etymology**, a brief language history of a word, comes at the end of all definitions, including the idioms. A complete list of abbreviations and symbols used in the etymologies is provided below.

The last part of the entry contains **derived** forms for the entry word. They are printed in boldface type and broken into syllables, followed by a part of speech, as at the entry **ex-haust** . . . —**ex-haust'i-ble**, *adj.* —**ex-haust'i-bil'i-ty**, *n.*

SPECIAL FEATURES

The **equal sign** (=) is used in the dictionary for exactly equivalent terms and cross-refer to the preferred or more widely used term that has the same meaning (for example, **ben-zol** . . . **1** =benzene . . .).

Words added to a definition following a semicolon can be used as substitutes for the entry word (for example, **bit-ing** . . . *adj.* . . . **2** sarcastic; sneering). They are not, however, exact equivalents of the entry word.

The **figurative label** (**Fig.**) generally indicates that a particular meaning for a word has been broadened to encompass more than a word's core or literal meaning. For example,

Ar-ca-di-a . . . **1** a mountain district in the S part of ancient Greece, famous for the simple, contented life of its people. **2 Fig.** a place of contentment.

Many usages marked *Informal* are widely used in conversation and can be freely used in writing except when a more formal tone may be required, as, for example, in applying for a job, writing a term paper, etc. We have used the label *Informal* very liberally because of the widespread use among writers of many words and usages that entered English as slang but have become integral parts of the common vocabulary. By contrast, the *Slang* label has been used very sparingly. The writer should be aware that slang is generally not used in formal writing but is usually acceptable to use in emails and other writing among friends and contemporaries.

The dictionary also distinguishes between **combining for ms**, which are abstracted from whole words and which combine with other words to make new ones (**bio-**, as in *biodegradable*), and **prefixes** (**arch-**, as in *archduke*, *arch-liberal*, *archencephalon*).

COMPLETE PRONUNCIATION KEY

The pronunciation of each word is shown just after the word, in this way: **ab-bre-vi-ate** (ə brē'vi āt). The letters and signs used are pronounced as in the words on page viii. The mark ' is placed after a syllable with primary, or strong, accent, as in the example above. The mark ' after a syllable shows a secondary, or lighter, accent, as in **ab-bre-vi-a-tion** (ə brē'vi ā'shən).

Some words, taken from foreign languages, are spoken with sounds that otherwise do not occur in English. Symbols for these sounds are given as "Foreign Sounds."
